
I can't see any parameter!??

Posted by Sperling - 2012/08/10 13:06

I tried this plugin on my local pc and it works very fine!
I can see all parameters and there are no problems.

Then I make the Installation on the real website:

No Error - I enabled this plugin but there are no more parameters ??? for example: theme or anything else???

Whats's wrong ?

Hello,

We can investigate the problem if you provide a temporary access to your J! backend by email.

Regards,
ARI Soft

Hello,

I close now the temporary access for the backend.
If you need it again, please ask again.

Regards

P. Sperling

Hello,

Sorry for asking again:

Is there any condition for this plugin? for example php version 5.3 or something like that?

Or is it my fault?

Please give me a little answer, so I can decide, whether waiting on your answer or use another plugin?

Thank you in advance.

P.Sperling

Hi,

it's me again,

I find the problem: the file script.php was not there. !!!

Now everything works fine!

Thanks
