
code for lightbox

Posted by infragreg - 2010/05/09 13:58

hi guys

great little plugin :)

however i'm having difficulty with the required code to display an article/html in the lighbox

would you be so kind as to explain in in easier terms than on your demo site?

for example if my link to my article is:

www.mysite.com/index.php/article.html

how would i structure the code you provide with that article link? I've tried a few variations with some ugly results :(

thanks heaps

=====

Hello,

Use the following code for showing external page (www.mysite.com/index.php/article.html):

Show article

If you have any difficulties with this, you can provide temporary access to your Joomla! backend by email and we'll help you configure the extension.

Regards,
ARI Soft
