## Lightbox issue on different browsers

Posted by IMihaylov - 2014/02/10 10:15

---

Hello,

I was wondering what could be the cause of different browser behavior regarding the lightbox? I mean i made a website using Joomla 3.x and it's working fine with chrome. But the image button is not showing in firefox... Also the document, which is iframed is not loading completely on IE. You can see what i mean on this link.

Thank you for your assistance in advance!

Best regards,  
Ivan

Hello,

These are not "ARI Sexy Lightbox" issues. The image is not shown because you use incorrect path to it. It should be /new/images/pregled.png instead of /new/images\pregled.png . You also load PDF document via Google Docs service, but it doesn't support the latest version of IE browser. You can read about it here.

Regards,  
ARI Soft
