
position on remote content webage

Posted by jimcapraro - 2014/03/20 07:35

I would like to have the light box open a web page at a "pre-scrolled" position so that the top left corner of the webpage as it open is the light box is at:

Vertical position: -787 pixels

Horizontal position -50 pixels

See page here: [Donation page](#)[Donation page](#)

Here is an example of "wrapper" frame I created using an iframe wrapped in the css template div below. I need the lightbox to load & display the url in the same way - so that it is "pre-scrolled" to the position I want to display.

pre-positioned (pre-scrolled) remote url

```
#my-div
{
  width   : 990px;
  height  : 1700px;
  overflow : hidden;
  position : relative;
}
```

```
#my-iframe
{
  position : absolute;
  top      : -787px;
  left     : -50px;
  width    : 1024px;
  height   : 2600px;
}
```

When we open "direct-donation-page" in FireFox browser, scrollbar is located at the top of the page.
