## Image from SobiPro

Posted by Budrys - 2015/05/21 14:44

---

My page: <http://sportum.pl/trenerzy/191-mizzo-professional-websites>

Hello.

My images from Sobi Pro don't display correctly

I use "sexylightbox" class name in Sobi Pro field.

Should display like on page ( go to "Galeria" tab: <http://zespoly-weselne24.pl/492-centrum-rozrywki-space.html>)

Could anybody help me?

=====

Hello,

"ARI Sexy Lightbox Lite" is a content plugin and it works in Joomla! articles. If you want to use the lightbox anywhere, you can be interested in ARI Sexy Lightbox extension.

BTW, "ARI Sexy Lightbox Lite" handles rel="sexylightbox" attribute, not a CSS class name.

Regards,  
ARI Soft

OK.

And how it works here:

go to "Galeria" tab: [zespoly-weselne24.pl/492-centrum-rozrywki-space.html](http://zespoly-weselne24.pl/492-centrum-rozrywki-space.html)

That is Sobi Pro.

I think the ARI Sexy Lightbox Lite doesn't load on my page

Probably a modified version of the plugin is used on this page or it requires specific settings in Sobi Pro. By default Joomla! executes content plugins only in articles and in "Custom HTML" module if "Prepare content" parameter is set to "Yes".

"ARI Sexy Lightbox" extension contains plugins which can work in any content.
