
Lightbox doesnt popup..

Posted by SBS_JR - 2010/07/29 18:03

Ok I cannot get this plugin to work, not sure if its a conflict or what.. seems like its not even loaded.. it just opens in a new window.. here is code I am using, I am using both mine and yours provided as an example and both do the same thing..

Goooooogle

Hello,

It seems site template contains incorrect code for removing MooTools javascript library. Could you open template index.php file and provide code between and tags?

Regards,
ARI Soft

Ok I am guessing what youre looking for is not inside the head tags on this template but I think I got what you want here...

```
*/

// no direct access
defined('_JEXEC') or die('Restricted access');

include_once(JPATH_ROOT . "/templates/" . $this->template . '/lib/php/yootools.php');
include_once(JPATH_ROOT . "/templates/" . $this->template . '/lib/php/yoolayout.php');

$template_baseurl = $this->baseurl . '/templates/' . $this->template;

JHTML::_('behavior.mootools');

// add template mootools to JDocumentHTML
if ($this->params->get('loadMootools')) {
    $this->_scripts = array_merge(array($template_baseurl . '/lib/js/mootools/mootools-release-1.11.js' => 'text/javascript'),
    $this->_scripts);
    unset($this->_scripts);
}

// add template javascript to JDocumentHTML
if ($this->params->get('loadJavascript')) {
    if ($this->params->get('reflection')) $this->addScript($template_baseurl . '/lib/js/reflection/reflection.js');
    if ($this->params->get('lightbox')) $this->addScript($template_baseurl . '/lib/js/lightbox/slimbox.js');
    $this->addScriptDeclaration($yTools->getJavaScript());
    $this->addCustomTag("");
    $this->addCustomTag("");
}

// add template css to JDocumentHTML
```

```
$this->addStyleSheet($template_baseurl . '/css/template.css');  
if ($yTools->getCurrentColor() != "default") $this->addStyleSheet($template_baseurl . '/css/' . $yTools->getCurrentColor()  
. '/' . $yTools->getCurrentColor() . '-template.css');  
if ($this->params->get('lightbox')) $this->addStyleSheet($template_baseurl . '/lib/js/lightbox/css/slimbox.css');  
$this->addCustomTag("");  
$this->addCustomTag("");  
$this->addCustomTag("");
```

?>

Thanks for information. We have found the problem. You try to use the plugin into a module. 'ARI Sexy Lightbox Lite' is Joomla! content plugin. It means it can be used in articles because Joomla! runs content plugins only in articles, not in module. If you want to use sexy lightbox anywhere, you can be interested in ARI Sexy Lightbox it contains 'System - ARI Sexy Lightbox' plugin which provides possibility to use sexy lightbox in any Joomla! content, not only in articles.

I'm having the similar problem where it works in one example, but not another when using the exact same code.

Works correctly on this page... <http://www.dasisolutions.com/joomla/index.php/company/customer-forms> on 'Melissa' link at right

But not from this page...

<http://www.dasisolutions.com/joomla/index.php/training/descriptions> on 'Request Class' link at right

Is the difference the page type (article vs category)? If yes, would upgrading to non-Lite version allow me to use the lightbox on a category page?

Re:Lightbox doesnt popup..

Hello,

ARI Sexy Lightbox Lite is Joomla! content plugin. Joomla! runs content plugins only in articles. It doesn't run them in module or components (except com_content articles). If you want to use sexy lightbox anywhere, you can be interested in ARI Sexy Lightbox extension. It includes 'System - ARI Sexy Lightbox' plugin which provides possibility to use sexy lightbox anywhere.

Regards,
ARI Soft
