
Fatal error: Out of memory (allocated 59244544)

Posted by jajsuscrip - 2011/11/15 21:44

I have installed the ARI photo gallery and enabled the plugin. I have entered the path for images (images/fotos), but I am receiving the following message:

Fatal error: Out of memory (allocated 59244544) (tried to allocate 13824 bytes) in /homepages/19/d384289832/htdocs/modules/mod_ariphotogallery/includes/kernel/Image/Asido/class.driver.gd.php on line 438 and the site don't load.

Sometimes, the site loads but the modures are showing the message for empty images.

My site is www.consejoinformativostve.es using Joomla 1.7.

I forward the site admin and password.
Thank you very much!

Hello,

The error appears because memory limit is exhausted when PHP GD library try to create a thumbnail for an image. It can be fixed if disable auto generated thumbnails in module settings or contact hosting support and ask about memory limit. It seems web server is configured to allocate maximum 60M for a PHP script (but "memory_limit" PHP parameter is set to 90M by default and overridden to 384M, but it is not possible to use all of this memory).

Regards,
ARI Soft
