
Simple Gallery Horizontal Image Count

Posted by wedontbyte - 2012/05/29 20:56

Hi

I'm really pleased with the results of this Extension - looks really professional.

But, is there any way to vary the number of thumbnail images displayed across the page from within the AnyWhere parameters.

I'm normally showing five thumbnails, but occasionally I need to show six or maybe seven (on a different web page). I can specify the width of each thumbnail and therefore fill the line, but when I have more than five thumbnails, I end up with one or two on a second line - spoils the effect!

Many thanks.

Hello,

Use itemCount parameter for {ariphotogallery} tag.

Hi

Doesn't seem to work. This is what I coded in the Joomla Article:

```
{ariphotogallery activeType="imglist" type="gallery" itemCount="6" thumbWidth="101" dir="images/y2011-winners/A1-API" descrFile="api-titles.csv" opt_galleryTitle="Advanced Projected Images"}{/ariphotogallery}
```

The results can be viewed at www.heswallphotosoc.co.uk/index.php/hps-comps-m/hps-comps-2011-m/hps-y2011-ac1-m although thumbWidth used is "151".

Plug-in Manager "System - ARI Photo Gallery Anywhere" is configured with "Items per Row" set to 5 and the web page displays five. "Visible Item Count" is left blank.

I've tried leaving "Items per Row" blank but it gets set automatically to 3. I tried setting it to "0" but got "division by zero" errors.

I've tried the reverse! Setting "Items per Row" to 6 and using itemCount="5" in other articles but I then get an empty image cell at the end of the line where there are only 5 images.

Regards.

Download and upgrade "ARI Photo Gallery Anywhere" plugin. It should help.
