
z-index issues with Joomla! template

Posted by jservices - 2010/06/17 17:49

Hello!

I'm having a little difficulty resolving an issue with ARI Photo Gallery and a Joomla! Template. The template is called JA Sulfur and there are 2 elements that will appear on top of the gallery's popup window. Here is the URL.

Gallery link.

The first is obvious, the breadcrumb area (You are here:) appears in front of the popup and the second is the top menu area which can be seen when an image expands the popup above it.

Can anyone help with this??

Thanks.

Hello,

Add the following CSS rules to your Joomla! template CSS file, please:

```
.mb_overlay
{
    z-index: 1000;
}
```

```
#mb_gallery_
{
    z-index: 1001;
}
```

Regards,
ARI Soft

Awesome! Works perfect.

Thanks for the quick response!

...on a separate note I am trying to figure out why my first image in my folder doesn't show up. I named my images 01.jpg, 02.jpg, 03.jpg, etc... All images show up except the first one. I've cleared cache, deleted all files on server and re-uploaded them all but the first one always gets ignored.

Is this normal behavior?
