ARI Photo Gallery

Posted by Mogwai - 2017/02/14 22:26

_____

Hi,

I have 2 questions to the Photo Gallery (it was easy to configure and worked immediately, GREAT extension for my purposes!).

1. I would like to have a border around my photos. How can I manage that without adding it manually to each picture?

2. Description file works well but I would like to have it constantly displayed and not only when the mouse moves over the shown picture. People often don't read instructions written besides the thumbnail (e.g. move mouse on photo to see description). It would be great if with a code in the necessary file I could fix that.

Thank you in advance.

Regards
Gerda

_____

Hello,

1. Do you mean border for thumbnails which are shown on a page or into the lightbox?

2. Add the following CSS rule to a site template CSS file and clean browser's cache:

.galleryDesc {display:block!important;}

Regards,
ARI Soft

_____

Hello,

I mean for the thumbnail. I have it the way that only one thumbnail will appear in the content page.

Thank you!

Regards
Mogwai

_____

Hello,

Add the following CSS rule to a site template CSS file:

.ari_lightbox_container IMG {border:2px solid red;}

_____

Hello,

Great, thank you. Works perfect. And I dare to ask an addition:
what is the code if I want to have a slight shadow right side and below the thumbnail like with the simple gallery thumbs I used until now?

Thank you, regards
Gerda

Hello again,

admin wrote:
Hello,

....
2. Add the following CSS rule to a site template CSS file and clean browser's cache:

.galleryDesc {display:block!important;}

.....
And would it be also possible to have the description down below the photo in the "frame" of the Photo Gallery instead of right side on the photo? It would look much better, because somehow it disturbs directly on the picture, especially when it is smaller photos.

Thank you, regards
Mogwai

_____

1. Add the following CSS rule to show shadow around image:

.ari_lightbox_container IMG {border:1px solid #ececec;padding:3px;box-shadow: 2px 4px 4px #aaa;}

2. The extension doesn't support ability to show description in photo frame.
