
Best extension for my kind of galleries ???

Posted by zinny - 2017/06/11 19:55

Hi,
I will add galleries to our website www.ag.fantasy.de to show figure painting of our members or guests.

The galleries have up to 200 photos from one folder for each member. I need the possibility to add some information to each photo: theme, figure size, figure manufacturer and kind of painting.

From your point of view which extension is the best one for this "project" ???

Thank you for comments / information

Bernd

Hello,

Check ARI Magnific Popup extension. It can create image galleries uses images from the selected folder(s) (supports paging) and show images into a lightbox. Titles and descriptions can be defined in CSV file. One note, it doesn't support ability to define several columns (for example theme, figure size and etc.) in CSV file and then combine them into a title. It can be implemented as a custom feature.

PS: You can try free version of the extension.

Regards,
ARI Soft
