## Feature Request / Information Request

Unsure whether or not these facilities are available.

1. With the demise of Picasa, I would like to see the ability to get images from Google Photos. I've got a free version of another image display package which only requires that part of the e-mail address before the "@" and then shows a list of albums. But I'd be happy to have to specify the album name!

2. I've been delving in Search Engine settings to try and improve Google ranking, and one of the big things SEOptimiser complains about is lack of a value in all the image ALT fields. Is there any way of putting the image title (or even file name) into the ALT field - I use the "Anywhere" facility a lot in my Joomla articles (being a camera club.)

Many thanks for your extensions - really great.
