Ari-Quiz has an export feature.

How can we ever get these questions out without retyping them all by hand?!

0
```

[illegible]

What were you thinking users would do with an .xml file like this? You programmed a whole page to export questions and quizzes... so you must have had a purpose for having Ari-Quiz export .xml file like this? But what did you think users would do with this .xml file... especially with only numbers (i.e. encoded text??) and so no way to see their own data?

This is very puzzling to me.

How I can export our quiz questions which we typed into Ari-QUIz in a format that at least shows the questions in a readable format?

Hello,

---

Currently the component use XML format for import / export data from one component instance to another, it doesn't provide human readable format. This functionality will be improved in a future release, we will add CSV export feature (currently only CSV import is available) and add XML human-readable format.

I would like to request that exporting be added. Do you have any estimate of how long it would take to program that feature in? Would it help if we paid for custom work to be done that would cover the programming time needed to add this feature? I think we would like it very much and so would many of your other customers?

Hello,

We will add this feature to the component after release version 3.0.0.

Any news about this function?

Also what did happened with Import/Exaport Data function? How can i move everything from Ariquiz 2.10.3 to ARI Quiz v. 3.6.15

If you want to move all data from v. 2.x to 3.x, you copy all "ARI Quiz" DB tables from old database to a new database and then install the latest version of the extension.
