
Problem with { \$UserName } . It shows name not usern

Posted by cos - 2011/02/10 13:23

Hi

Why the tag { \$UserName } shows name and not username. The quiz we are playing is a quiz of characters. It is very important to show username on the successful email template but the tag { \$UserName } shows name.

Also is it possible to style the { \$UserName } or any other tag and how?

Thanks

Hello,

Download component from "Member Area" and upgrade it. The latest version supports { \$Login } predefined variable.

You can wrap it with tag. For example:

{ \$Login }
