IP Addresses of people answering
Posted by cos - 2011/02/15 16:14

_____

Hi

Is it possible to find the ip addresses of the people answering the questions. They are all members but I want to find their ip addresses where they answered the quiz from. Is there a way?

Thanks

_____

Hello,

IP addresses are stored into "jos_ariquizstatistics" database table. See "IpAddress" column.

_____

Is it possible to show the ip in the results page in the back end? I need to have the names and their ip addresses. Maybe even in the statistics page in the view results option.

Also the ip address in the jos_aristatistics table is not in the form of xxx.xxx.xxx.xxx but a number like 6745. There are many identical numbers but i am sure that the players play from different places. What is that ip number? And how do I find which player is which ip address.

Sorry for all the questions. The bottom line is that I need to check the players by their IP address to prevent as far as I can to give one player the answers to another.

Thanks

_____

Check your mail please. We have sent update which adds "IP Address" column to results data grid on component backend.

PS: IP addresses are stored as nubmer in database, not as string in format like "xxx.xxx.xxx.xxx". You can read about INET_ATON and INET_NTOA MySQL functions.
