
result from quiz

Posted by fearanphoist - 2011/02/18 21:58

hi,

i have my quiz working no problem . i have added another quiz recently and i cant seem to get the result to show properly . example i have the quiz set to 2 questions randomly picking from 4 which are multiple choice.

when i answer the two correct the result shows failed 0/0 . any ideas folks on it , its probably small just cant find the setting.

thanks

Hello,

Open question settings page and check that "Score" field is set not to "0".

Regards,
ARI Soft

thanks i changed that . it worked .

i thought about this but funny enough the quiz i have working now there are questions in that quiz set to 0 score and its working lol . thats why i didnt go for this . i dont get it . the results work there . its all working now but them questions are still at zero score .

thanks for the quick reply :-)
