
I have EXACTLY the same problem.

Posted by price1 - 2008/08/03 12:28

I am using Joomla 1.5.5 and the new versions of JCE Editor.

With JCE selected in Global Configuration, both the Save and Apply buttons do not work.

If I change the editor in Global Configuration to TinyMCE 2.0, the buttons work!

This is not my preferred option as JCE is the editor I use, but it is a work-around for now.

A fix to permanently rectify the problem would be most appreciated.

Fantastic! Thanks very much.

I have one other request though ...

We don't want our quiz-takers to have to log into our site but we do want their results to be sent to us with their name and their date of birth attached.

Is there a way to create a field for each of these elements at the beginning of each quiz so the quiz-taker can enter this information?

Also, can we have their actual quiz answers sent to us rather than just the summary form?

Here's hoping you can help.

The both points can be done by custom development. If you are interested please write your exact requirements to us via email and we will make the estimation how long it will take us to implement this for you.

I will do. You can expect that email within 48 hours.

Many thanks.
