## how to add personal info in quiz results?

Posted by sanya12345 - 2011/02/26 13:26

---

I've made a quiz which is intended to gather personal info of the people who pass the quiz. In registration form on the site there're fields for Name, e-mail, phone number, username and psword. But when I get the results of all passed quizzes on admin e-mail I can't see the phone numbers! How can I add phone number to the result form which is sent to admin e-mail? I use ARI Quiz Lite. Does this version support such function? If it doesn't what version does?

Hello,

The extension doesn't support this ability. It can be done as custom development.

Regards,  
ARI Soft
