Menu problem
Posted by hiegl - 2009/02/10 17:21

_____

Hi ARI-Team,

when I installed ARI-Quiz it created two menu items in the main menu. Now after I made a quiz the first of these menu items leads to the category of my quiz. There the menu item is active and highlighted correctly.
After clicking my quiz the same menu item is still active and highlighted.
Now I see the info text of my quiz and a button leading to the questions.
After clicking this button I see the first question but unfortunately I seem to be out of my menu hierarchy. This is also shown by my breadcrumbs menu, which shows that I am at "Home", while I should still be at the former menu item of the quiz.

How can I retain my menu hierarchy while browsing the quiz?

Any idea?

Thanks, Bernhard

_____

It is a closed site only for registered. If necessary I may be able to let you in.
There is only Joomla built-in SEF in use:

SEF: yes
mod-rewrite. yes
add suffix: yes

Any ideas?

Thanks, Bernhard

Thank you very much for your help!
Will de-installing and re-installing leave my active quiz with all statistics 100% usable as it is now? Is there anything to do after reinstallation or will everything work as it was before?
