
Lag time on tests

Posted by MikeWelsh - 2011/03/11 11:30

Hi,

There is no tooltip on the Lag Time for a quiz before it can be retaken.

Is it measured in hours, minutes or seconds?

If I set the Attempt Count to 1, does that mean the user is locked out after 1 attempt regardless of whether they pass the test or not?

Is it possible, like a learning path, to set a minimum time elapse between when they do a Test A and when they can then do a Test B?

Is it possible to automatically redirect them to different pages depending upon the result of the test, e.g. below 30% go to page A, 30-50% go to page B and greater than 50% go to page C?

Thank you.

Hello,

1. "Lag time" parameter accepts value in seconds.

2. When "Attempt Count" parameter is specified, the extension doesn't take into account previous user quiz results (passed or not), we will extend this functionality in a future release.

3. No, it is impossible.

4. We have plugin which provides ability to redirect a user to specific link depends on s/he passed quiz or not.

Hi,

Thanks for prompt replies.

Please send me plugin to redirect to different links on pass/fail quiz.

Thanks, Mike.
