_____

Dear Expert
Could you help me please. I use ARI quiz for my students. I want to analyze quizes after my students had done the tests (Multiple choices). I have their results. How could I export all students' answers (both correct and wrong optiions they chose). For off-line analysis in the excell or other quiz analyzer program such as EVANA or BILOG etc.

Hello,

Could you provide sample Excel file?

Regards,
ARI Soft

Thank you very much for response.
I attach the excel file and xml. This is the test results of my medical students, 16 students, 100 quizez. This is the export from the ARI quiz result; xml format. Partly, I open it with excel. I can identify that each student answer right or wrong for each quiz. But I don't know exactly what options they chose for wrong options (from 5 options). This is important for quiz analysis to know how appropriate of the options.
Million thanks.
T Tongsong.

Dear Expert: I have sent you sample export excel and xml via e-mail.
I want to export the answer options that users have chosen as we have seen in the detail section of the results in ARI-quiz. I want to export the data of what the user had done, for analyze the quality of quizes off-line.
Could you help me
Many Thanks

Dear Expert:
Again.. What is the main purpose of export data in XML file (export.XML) and how we could use it after export!!!
Thanks!!!!

_____

Sorry, but it seems you have converted export.xml file to Excel file. We mean that you provide sample Excel file which you need for your offline quiz analyzer applications.

Regards,
ARI soft

_____

Thank you
but could you suggest me that how can I extract the data showing the option which users have chosen either correct or wrong (from 5 choices from the export XML file. I want to know the exact options they chose. I know the data contain in the file. Is there any custom feature??

_____

This XML file is used only for import/export data from one component instance to another. If you want to select information about quiz results, it requires additional coding. Could you provide sample file which is required for your offline applications?

Regards,
ARI Soft

Dear Admin

Have you got my example excel file? Do you understand my request?
All what I want is exported raw data of the exact options which the users had chosen for each quizez either right or wrong.
May I request a custom feture for this data if it is necessary.
Best Regards.

_____

Thank you very much for your response

Yes, this apply for single question for only one correct answer. I have 4 or 5 options for each quiz. Key option is the correct option. I want to export the opitons which each user chooses for each quiz as well. (as you see in most part of the excel spread sheet). I think you understand my points now. Please note that I also want the field for an option that the users choose. I want this data for quiz analyzer to see if how many times each option (right or wrong) is chosen. How could I export in readable format. I think that these data contain in exported XML file but I could not read. I will be very happy if you make it readable. Could you please provide a custom feature for this.
