Scoring Answers & Statistical analysis.

Posted by aGiver - 2009/03/03 14:29

_____

I am seriously considering buying this component but I need to clarify availability of some of the features:

1. I could not find a way of scoring answers to questions in the demo version, but studying the forum it seems there is a way of scoring answers as integers rather than percentages? I am looking to implement a survey, where there are no correct answers.

2. What Statistical Analysis are available? I am looking for the following:
 a. mean
 b. mode
 c. median
 d. Standard Deviation
 e. Maximum
 f. Minimum
 g. Percentage of Results with a particular answers.

3. Is it possible to have Graphical Representation of the data?

I will be much obliged if you can help me to clarify the above.

Rgds.
Jay

_____

Hello,

According to your questions:

1) You can set different score for answer in percent for 'Single Question', 'Multiple Question' and 'FreeText Question'. Use '% Score' field for 'Single Question' and 'FreeText Question', and '%' field, which appear if you click '+' button near label 'Correct', for 'Multiple Question'.

2) Currently the component don't contain statistical analysis tools.

3) No. Currently you can see result in text format and export it to Excel, HTML, Word or CSV file.

Regards,
ARI Soft
