
Multi question: Counting % score don't work

Posted by aadjeh - 2009/03/08 21:43

Hello,

I've the testing license and working it out... Quiz....!

Question 1

I thought i've seen the light, but it didn't work out. The score on every test is Zero (0)

I've made 7 questions (Multi radio button) with 0/20/40/50/60/80% score.

Made a result scale van 0-30, 31-70, 71-100% scale. With email and text messages.

What to do?

Question 2

When i change an item in a radio question and save the question, i get the next message/popup: Question is required.

Just boring for my clients when the site will become life.

Question 3

Language file. Is there a dutch language file ready for download?

Thanks...

Hello,

According to your questions:

- 1) Do you set score for question in 'Score' field?
- 2) Can you say your Joomla version and which WYSIWYG editor and browser you are used?
- 3) We have only English, German and Russian translations.

Regards,
ARI Soft

Hi,

Problem 1 is solved, Indeed the score was 0. Now it is changed it's working fine.

Problem 2 is still there:

Joomla 1.5.9 / jce editor v 1.5.1

Problem 3 ...)&^(* V_(*_ what a pity....:woohoo: Now I have to do it myself. Otherwise I can't imagine that there is no other dutch guy or girl has it already done. Do you know a site from the Netherlands which I can contact...?

Another question or proposal for improvement:

Can you integrate it with CB?

Can you integrate a possibility for make a selection per quiz for registration or not?B)

Grtz Adri

Hello,

We try JCE editor v 1.5.2 with FireFox and Safari browsers and all works fine. Can you try it? And say your email, please, that we can send info about dutch customers.

About improvement:

- 1) Which integration do you mean?
- 2) Can describe this feature in more details?

Regards,
ARI Soft
