
A final total score

Posted by halmstadmicke - 2011/05/17 08:55

A final total score

Example

Review for restaurants

Quizze 1 - One star restaurants

Categori 1 - FOOD with different questions and points

Categori 2 - SERVICE with different questions and points

Categori 3 - ATMOSPHERE with different questions and points

Categori 4 - VALUE with different questions and points

Quizze 2 - Two star restaurants

etc.

I want to sum the different scores from each Categori to a total score, in a Question Scores Report.

How do I do that?

(I know Focusdev - Survey Manager have that function)

=====

Hello,

Do you want to show score for each question category at the end of a quiz?

Regards,
ARI Soft

Yes I want to show a score for each question category and a summary total for all question category's.

Example

Categori 1 - FOOD	10p
Categori 2 - SERVICE	15p
Categori 3 - ATMOSPHERE	20p
Categori 4 - VALUE	20p

Total 65p

Additional to the category summary total and total summary
it would be good if shows "passed" or "not passed".

Thanks for quick reply.
Unfortunately your answer was not a straight answer of my description.
So I dont think Ari Quiz can meet my demands.
