A final total score

A final total score

Example

Review for restaurants

Quizze 1 - One star restaurants

Categori 1 - FOOD with different questions and points

Categori 2 - SERVICE with different questions and points

Categori 3 - ATMOSPHERE with different questions and points

Categori 4 - VALUE with different questions and points

Quizze 2 - Two star restaurants

etc.

I want to sum the different scores from each Categori to a total score, in a Question Scores Report.

How do I do that?

(I know Focusdev - Survey Manager have that function)

Hello,

Do you want to show score for each question category at the end of a quiz?

Regards,

ARI Soft

Yes I want to show a score for each question category and a summary total for all question category's. Example

Categori 1 - FOOD 10p Categori 2 - SERVICE 15p

Categori 3 - ATMOSPHERE 20p

Categori 4 - VALUE 20p

Total 65p

Additional to the category summary total and total summary it would be good if shows "passed" or "not passed".
