## Joomla SEO + Ari Quiz

Posted by xe\_interactive - 2009/03/25 14:51

---

Hi there

Just finished a little site for a customer.

The menu has a direct link to a quiz (...index.php?option=com\_ariquiz&task=quiz&quizId=2&Itemid=6) and a module is assigned to the same menu point. When i turned on the Joomla SEO options (all on) the assigned module on the left doesn't appear and messes up the layout. With SEO off everything is fine.

Any ideas?

Hello,

It seems that this problem in Joomla SEO because it lost Itemid parameter for external link, but Joomla use this parameter for showing breadcrumbs, modules and etc. You can use 3rd party component for SEO, for example sh404SEF <http://extensions.siliana.com/>

I already tried sh404sef. Then the module assignment works fine for the welcome-screen of the quiz. But as soon as i start the quiz, the assigned module to the left disappears again and the layout is messed up. Did it work for you?

We have sent it to email which you have indicated in your user account. We wrote the following:

Find zip archive in attach , please. Unzip it and copy take\_quiz.php file to /components/com\_ariquiz/frontend\_pages/ folder. It should resolve problem.

Looks like we're taking this one step by step ;) Now the module works during the questions. But the evaluation/result page afzter the quiz doesn't show the assigned module.
