## Some suggestions for future releases

Posted by turminator - 2011/06/10 13:12

---

Hello, I learning Quiz component and I think some ideas that will be good for future versions:

1.- Create a pool of questions. I think that will be good that in future can create a special quiz called "Random" for example and in this quiz can set number of questions that will be showed and takes this questions from other selected quizzes. This is different feature than "Random Question".

2.- Option that user can select if wants to view failed questions (and correct answer) in every step or at finish of completed quiz.

3.- Option that user can restart quiz if he wants.

4.- Navigation quiz option. Option that user can browse inside quiz. For example if he are answring question 20, and think that his answered question 15 is wrong he can go to 15 and modify answer.

Hello,

Specify please do you mean "ARI Quiz" or "ARI Quiz Lite"? "ARI Quiz" contains questions bank and provides ability to show explanation and correct/incorrect answer after each question or at the end of a quiz.

Regards,  
ARI Soft

Hello,

Now I'm using lite version. I'm ok if this exists in full version. I'm shareing ideas and later you can adapt in full or lite version in your concern.

Many thanks!
