
Half point or percentage score doesn't work

Posted by vizzygo - 2011/07/06 14:54

In single question type, For One point score i would like to define half point when there are 2 good answers of 4. As described, i tried to allocate 50% for both good answer but one is always disable (gray form). What is wrong ? Same by changing with multiple question type, i can't allocate 0,5 or 0.5 for each good answer...

Hello,

Currently the extension supports only integer numbers for scores.

Is that the correct way for what i'm looking for ?

2 good answers of 3 and score of 1 point for the question settings
In that case the quizz compute 2 points ! because of integer rules ? http://www.ari-soft.com/images/fbfiles/images/2011_07_06_171555.png

Currently it is impossible to use float number. This feature will be available in "ARI Quiz" v. 3.0. In your case possible way is increase question score to 2 points for example.
