
Add multiple questions from the bank

Posted by NidhiKharbanda - 2009/04/29 07:54

When is next release of Ari-soft scheduled - having feature to add multiple questions from the bank to a quiz, I saw on forum that it is scheduled to release in short span of time.

Hello,

ARI Quiz 2.4.0 is available and it contains possibility to add multiple questions from the bank to a quiz. You can download the latest version in 'Member Area' on our site.

Regards,
ARI Soft

Does this version has option to display answer after every question is answered, and how to install new version on existing version.

Could you explain what you mean "Does this version has option to display answer after every question is answered"?

For installing new version of the component do the following:

At first, uninstall of the component. This will remove all the files related to the component, but all the data will remain in the database. After this, install the new version of the component. That's it, the component is ready.

I want to display correct answer to user as soon as he completes question, and not at the end of quiz.

How can that be done?

Thanks

Currently the component don't support this possibility. You can submit feature request about this possibility or we can

offer custom development of this ability.

You can submit it here. We can't say exact date when we implement it because now we have some feature in our plans which we are going to implement in several future releases, but it will not be earlier than a few months.

Regards,
ARI Soft
