# Problem when opening quiz link
Posted by ameschino - 2009/05/05 09:10
_____

Hi there!

I've just installed Ari Quiz on Joomla 1.5.8.
I've inserted licence key, categories, bank and so on...

I've published a menu item to ari quiz.
When I click on it, appears an error like this:

Fatal error: Call to undefined function sefreltoabs() in
/home/intel43/public_html/domainname/templates/ja_regulus_template_v1.2_1.5.x/ja_menus/Base.class.php on line 95

It's something about the commercial menu template's menu I've installed on the site.

What can I do?

Hello,

It seems that your template should work in 'Legacy' mode because sefreltoabs is function from Joomla 1.0. If you can
provide your template for research purpose, we will be able to say exactly why it happens.

Regards,
ARI Soft

I think that I could not give you the template.
Can I give you only the single file with the problem?

OK, send it to info@ari-soft.com, please, but are you sure that your template should work in 'Native' mode?

Regards,
ARI Soft

Hi there!

I've updated the template version and now it's working fine!

Thanks for your help!!
