reinstall

Posted by bentham - 2011/08/29 00:24

_____

Since there is no update for Joomla 1.6 i had to reinstall joomla 1.5 on my site using a sub-domain unfortunately this is not working please advise when you will have this issue corrected so i can utilize the product i paid for... if i am not able to use it on my newly updated main domain please let me know how to install it on my sub-domain and to reissue a license for that sub-domain. the sub-domain name is testing.allcarehealthservices.com which we have utilized in the past and now forced to utilize again since there is no upgrade to 1.6... Again please provide me with a license so i can utilize product for our hiring of new staff for our business.

Can you please assist so I can get my hiring process back in order... this is slowing my hr process down. If we can't get update at least new key to reactivate previous sub-domain on file www.testing.allcarehealthservices.com this site is under joomla 1.5 please help we are running behind schedule. Thanks
