How to give score to multiple questions

Posted by ameschino - 2009/05/13 14:35
_____

Hi,

I'm using Ari Quiz on Joomla 1.5 and it's working fine.
I'm testing a copule of quiz I've made but I have a question.

Supposing that I have a 3 points question with 6 options and only three correct answers, how can I give one point if the user check 3 even if only one is correct?

I've made a configuration like this one:

Hello,

Currently that resolve your issue, it requires that all variations will be defined.

Regards,

Hello,

You can create feature request and we'll implement it in one of the future releases.

Regards,
ARI Soft

Hi!

how can I create this request?
