arabic translation of the questions

Posted by elmasri - 2009/05/21 21:42

I installed ARI QUIZ for a multilanuge site and use joomfish as a translation component

i just can't find where and how to translate the questions into arabic...

please advice adel

Hello,

Sorry, but what do you mean? If you want have different question text for one question, it's impossible. You need create new quiz if you want that it'll available on different language.

Regards. ARI Soft

please have a look at www.nlschool.org click up on the navigations on the menu (Course Exams)

up there also you see the great flag for arabic all i want is to have the 76 questions translated into arabic language when i click on the arabic layout the questions should be shown in arabic

do i have to create all questions new for arabic?? i mean this website will finally be in 8 languages

is there a way to translate the english questions without creating new questions for every language??

thanks

Hello.

If you need arabic quiz, create questions in arabic language, please. If you need english quiz, create this questions in english language.

Regards, ARI Soft
