
Statistics

Posted by 4creator - 2009/06/08 01:59

Hello,

I updated ARI Quiz from 2.1.x to 2.4.0 yesterday. I found some new features. :blush:

My first question is;

When I clicked my menu linked `index.php?option=com_ariquiz&task=quiz_stat`, the web browser didn't show my statistics. Of course, before updating, that link worked fine for me.

Do I need to set something?

My second question is;

If I checked 'Show Full Statistics' option in quiz settings, I can't see the statistics with a list of errata like ARI Quiz Demo. What should I do if I want to show the statistics with a list of errata?

My third question is;

I found new feature "Result Scale". Do you have a user guide for this? I want to learn new features of ARI Quiz.

Sorry for my broken-English,
Hideto

Hello,

Regarding your questions:

1,2) Try to clean browser cache, please. If it don't help, say link where we can see this issue, please.

3) It's simple, but powerful feature. When you create new 'Result Scale', you indicate percentage range of user score in 'Start Point' and 'End Point' fields and choose 'Text Template', 'Print Template' and 'Mail Template' which will be used for user who earned score which between 'Result Scale' range. You can create unlimited ranges in one 'Result Scale', use for this purpose '+' button.

Regards,
ARI Soft

Hi,

Thank you for your investigating about my issue.

OK, I understood this issue has come from conflict with other module. Do you have any solution?

(I know that I should contact to that module maker.)

Thanks,

Hideto

May be change this module to another because 'SBD Accordion Menu for Joomla' uses old version of YUI javascript library which released 3 years ago. It seems that developers of this module don't support it now.

Regards,

ARI Soft

Hi,

I changed SBD to other module. My issue was solved. And I feel 'Show Full Statistics' of ARI Quiz is convenience for me :)

I'll check about 'Result Scale' later.

Thank you for your support!

Thanks,
