
Quiz Templates

Posted by Deshpande - 2009/06/09 11:04

Hi,

I would like to create quiz template which matches my site. Is there any guide or tutorials which will help me create quiz template?

Thanks in advance.

Deshpande.

Hello,

You can find templates files by the following path:

/components/com_ariquiz/view/

quiz_list.html.php - page with all quizzes is divided by categories

quiz.html.php - page which contains quiz description

question.html.php - main quiz page with questions

quiz_finished.html.php - final quiz page which contains quiz result

quiz_stat.html.php - page which contains user results

You can change HTML layout in this files for your needs and you can also add some CSS rules.

Regards,
ARI Soft

How do i change the CSS for inputbox, checkbox, radio buttons ?
because the radio button is taking the default width of inputbox css which is 400px which i have defined in my joomla template.

If we correctly understand, you have defined the following CSS rule in your template:

```
INPUT
{
  width: 400px;
}
```

If it's true, this is not good approach because INPUT tag is used not only textbox, but you can add the following CSS rule after your definition:

```
#ariQueMainAnsContainer INPUT
{
  width: auto;
}
```
