## version 2.5.1

Posted by rmam - 2009/07/16 14:26

---

I have installed recently the version 2.5.2

I red the version 2.5.1 was ready, and downloaded it. It says it could handle events like startquiz, stopquiz, and so on.

Could you tell me how to do it?

How can i make a bridge between ari quiz and other components?

Thanks

Rmam

Hello,

You can use for this purpose 'ARI Quiz Events' plugin which you can find here on F.A.Q. tab. Plugin code contains empty handlers for each event and you can place in it your own code or create new plugin based on 'ARI Quiz Events' plugin.

Sorry, but i don't know what is a event.

Do i need to be a programmer to creat a new event?

where can i learn more about this. The FAQ is not enough for me.

Thanks

Rmam.

This features for programmers, you can add code to plugin for handling events such as quiz start, quiz end and other. For example you can check specific permissions on quiz start event, or add score to your score system on quiz end event.
