How to select the amount of questions before test

Posted by robyki - 2011/10/28 14:38

_____

Hi,
I'm very interested in purchasing Ari Quiz.

Since my intention is to make a website that contains many quiz categories with a very high amount of questions (1000 per category),I'm wondering if the user(customer) is allowed to set in advance, before starting the test, a certain amount of questions (for example 150) he wants to practice and that the system will generate randomly, chosing from the 1000 available.

I'm also wondering if it's possible to show, in a side box (that looks like a calendar template form) the number of the questions selected by the user that switch the color of each question done from green to red depending on the wright or wrong answer.

I'm looking forward to your kind response.

Roby

Hello,

Sorry, but the extension doesn't provide this ability for frontend users. It supports ability to set how many questions should be selected from quiz questions pool in quiz settings by administrator.

Regards,
ARI Soft

Thanks a lot for your quick response.

As you can imagine it will be very frustrating for a customer, who wants to test his knowledge, to go through 1000 questions before getting his score/result.

I think that a valid solution to this problem could be to implement a resume box on the left side of the test page in which you can immediately see the results and the average of your test question by question. This way could be not so boring for the customer and could allow him to go through all the questions.

Do you think you can implement this function in your next versions or even by plug-in?

Regards
Roby

It is a good idea. You can submit a feature request here and we will think about implementation of this feature in a future release.
