
User-generated quizzes

Posted by kbellare - 2009/07/22 19:33

Hi,

I'm building a contest application where users can create their own quizzes and invite their friends to respond to the quiz, and wonder if this can be easily customized so that

- 1) Any user (say user 1, not admin) can create a simple quiz (1 question, several radio buttons of responses) under a category?
- 2) A catalog of such quizzes would be displayed, organized by section and category - can the ARI Quiz Plugin automatically show these quizzes under categories (without admin configuration of each user-generated quiz), or would it need to be customized
- 3) The answer is selected by the creator of the quiz - this might sometimes be after the contest ends (after a time period). The user is then notified of the answer.
- 4) Grant and track points to each user based on correct answers - i'll need to customize this as we would need to show history of wins, etc.

Is this fairly straightforward to customize ARI to achieve this, or am i better off writing from scratch? Any code samples/pointers would help.

thanks
kbellare

Hello,

Sorry, but ARI Quiz doesn't support possibility for creating quiz on the frontend and admin should indicate correct answer during creating questions.

Regards,
ARI Soft
