multilevel tests

Posted by Pii - 2011/11/15 17:50

_____

hi, I want to make multilevel tests. For example: I have quiz category 'sport', which include different sport tests about teams and players. so, I want to make test about l.a. lakers with 5 or 6 difficulty levels. And when you pass 1 level, you ll get acces to second, and finally get complete statistic after the 6 level. I thought that your learning path plugin can resolve my problem, but after I have installed it, I understand that plugin works a bit different. And it could get next level access after completing all quizzes in category. and it has just 5 learning pathes, it's not enaugh for me. can your component resolve my problem? thanks, and sorry for my gramma... Russian native.

_____

Hello,

If we extend the plugin and add ability to create 20 learning path, will it be suitable for your needs?

Regards,
ARI Soft

_____

I think it's not enough even 100. maybe I can add URL of next level test in template with successful result statistic. if youll add specific field in quiz settings of your component that will give link for different quiz if test will be passed. it will have reason for me. maybe in next versions. thanks

_____

If we add new filed to quiz settings, for example "Related quiz" where an administrator can select quiz and if quiz from "Related quiz" is not passed, a user can't get access to selected quiz. Is it suitable for your needs?
