## Is there a How-To or Tutorial

Posted by nontekkyguy - 2009/08/01 03:53

---

Hello I've been trying to set up a quiz, but the Help file does not explain in step-by-step how to start using Ari-quiz component. (eg. Joomla has tutorials that explain the steps: Section, Category, article )  
For example once categories are set for question type, what is the next step? Add a question or add a question template or add a question to question bank? In the add a question template area, there are 3 spaces to add answers. I thought the template is simply the display set up for a particular page (results, quiz, etc.) It's very confusing at least to me. Is there a 3rd party tutorial that explains how to properly use Ari quiz for beginners?

Hello,

For creating the first quiz, you can do the following steps:

- 1) Create quiz category. (If you don't need quiz category, you can skip this step)
- 2) Create quiz.
- 3) Create question categories. (If you don't need question categories, you can skip this step)
- 4) Create questions for new quiz. (If you want to add questions from question bank, create questions in question bank)

You can return to needed step anytime and change needed property or create needed category.

OK... I have added a category, a quiz and one question. How do I connect the question to the quiz?

I've put it on a menu and I can see the "intro/descriptio" (which I'd like to see on the same page as the first question.

When I get past the "intro" I get: Selected Quiz not available, contact with Administrator.

Use 'View' link in 'Questions' column in quizzes data grid.
