Quiz results problem
Posted by thomaskremer - 2008/05/28 14:45

_____

Hello,
I'm having problems getting the quiz results. The help indicates that HTML and Word would give a more detaild version of the results (I hope to see a list of all detailed question results for each person).
The problem is that all the buttons give CSV results. In the pagecode I find for each button (html, excel, word and csv): submitbutton('results$tocsv').

Where is the problem? And how can I solve it?
Thomas
