
How do I move my ARI Quiz Install to a new domain?

Posted by danivers - 2008/09/02 16:14

Hi, I would like to move my ARI Quiz install to a different domain. Do I need a brand new license key? Can I have one please? I copied the database info over, but I can't get past the "Please specify license key..." page.

Also, how much for a bulk license? This is a great piece of software, but the ARI Soft purchase system is a little different from most other companies. I'm used to paying for the actual software, and then using it as freely as I want. I realize it's my job to read the fine print, but I was still a little disappointed to find out that I have to buy a new license for each domain.

Again, the software is top-notch and user-friendly, but there's no way I can buy a new license for every site I build. With so much cheap & free software out there, my customers balk at the idea of shelling out an extra \$75 for a single component. Most of them only want to use it as an assessment exam for hiring new employees. They aren't re-selling it or making any money with it, so I don't understand the need for a per-site licensing scheme.

I'm gonna be forced to find an alternative for future sites, which means a lot of extra headaches for me, because most of them suck ass compared to ARI Quiz. A bulk license would really help people like me out and get your product that much more exposure. What say you, ARI Soft?

Hello,

We're working according to our license.

We're thinking about multi-license support in the nearest future. For now please check your email for our proposal.

Regards,
ARI Soft
