
compatibility with joomla 2.5.7

Posted by mmam - 2012/10/24 22:39

Hello,

I'm glad the new version has been released.

I'm a bluehost customer and they only install joomla 2.5.7 at the moment.

Does the new version works with joomla 2.5.7?

Does the new version import and export question bank?

The procedure to install the new version is just to uninstall the older version and install the new?

Thanks. Forwarding to hear from you.

Rmam.

Hello,

"ARI Quiz" supports Joomla! 2.5.7. Upgrade process is described here.

PS: Currently the extension doesn't support ability to export bank questions. It supports ability to import questions from CSV file.

Regards,
ARI Soft
