adding customized buttons to the text templates
Posted by jinlopez - 2010/03/14 20:28

_____

Hello,

For the text templates for both the pass and fail results, I need to insert a clickable button that redirects the quiz taker to take the quiz again, or to my client's registration page if they pass.

Is this possible? Also, I'm not able to adjust the text in the text templates. I tried switching the WYSIWYG CKEditor to TinyMCE Editor (was suggested to try that last time for a different issue), but that didn't work, either.

I attached a printout of the error.

Help?

Thanks!!

_____

Hello,

Do you use the latest version of ARI Quiz (2.9.3)? We have tried to add button for taking a quiz again and it works. If this problem occurs in the latest version of the component, provide temprorary access to your Joomla! backend that we can investigate this issue. You can use the following HTML code in text template for creating "Take again" button:

Regards,
ARI Soft

Please check your email. I sent you the link to our back-end, as well as set you up with a username and password.

Thank you.

Jin
