Error when

_____

Hello.

I am trying to set up two email addresses in the "Notification Emails" field in the Results Settings Tab of ARI Quiz.

When I enter more than one email address in this field, separated with a semicolon (;) as instructed I run into errors when trying to get my test to email out the results. I get a "You must enter at least one recipient email address" alert. I have been able to get it to mail successfully when only listing a single notification email, but not two.

I've also tried using other separator characters but I get error messages in the backend stating that my email address contains errors.

Any ideas on how to fix it?

Thanks,

-Tim http://www.ari-soft.com/images/fbfiles/images/error_02.jpg

Re:Error when

_____

Hello,

Download and upgrade the component. It should help.

Regards,
ARI Soft
