
EASY TO ADD QUIZ FEATURE VIA FRONT END

Posted by fire - 2010/03/25 06:35

Hi there! Nice product! I really like it and am ready to purchase, however I have a few questions!

I would like my paid users, the ability to create their own quizzes via a nice ajax front end. I would then like these quizzes to be able to be offered publicly, or to a subgroup of users.

Once purchased, is your code modifiable? ie: could I hire freelancers to mod the code, or your organization to do that?

Please let me know asap!
Thanks!

Hello,

Thanks for your interest in our product. Unfortunately the product doesn't provide ability to add quizzes from frontend interface, but we have this feature in our plans and implement this within 3-4 months. Core source files are encoded, but we'll release our product under GNU/GPL license within 1-1.5 month.

Regards,
ARI Soft

Yes, you can work with tables without problem. Could you explain what you under "import formats"?

yes, I see you can import quiz data into ari, what format can I import quiz questions in, can you please give an example

ie:

questions|answer1|answer2 etc

"ARI Quiz" can import questions from CSV file. You can find sample CSV file in this post.
