
Quiz results: user filter / search

Posted by nosins - 2008/04/21 15:17

Hello,

Our organization has a great many members, many of whom will likely want to try a quiz once we launch our new site. It has occurred to us that it will be difficult to view the results of members in the backend because there is no search filter for users - only a drop-down list. This will work fine, but will likely cause slow loading times with many users when the system must populate a drop-down list of hundreds or, in our case, thousands of users.

Thank you.

Hello,

ARI Quiz component has no such functionality for now. If you would like to have it soon, you can order custom development. This will take 1 hour of work and will cost \$20 as described in our license: <http://ari-soft.com/license.html>
