Add a css class

_____

Hi all,

Nice to use your component :-)
I would like to add a css class for arianwer fields...
>>> to use with arabic caracters (which are a lot smaller than latin caracters)

Do you think it's possible? Or maybe install a wysiwyg in the answers fields?

thx in advance for any answer

Re:Add a css class

_____

Hello,

You can try to add the following CSS rule to template CSS file:

#tblQueContainer {
  font-size: 20px;
}

Re:Add a css class

_____

Hi,
thx for your quick answer !
Actually I changed the arianswer class this way :

.ariAnswer
{
 vertical-align: middle;
 color:black;
 font-weight: bold;
 font-size: 25px;
}

but still, the problem is that the class is applied to all my anrianswer(s)
>>>perfect when I put arabic caracters, but really too big when I put occidental letters (and I need to use both -arabic & occidental)
The ideal solution could be to be able to apply a different css style from the backend.

Hope I'm clear enough?
I presume the solution is becoming to be an important hack...that could be integrated in the future in the pack? who knows... this arabic-caracters-size problem is very common for webmasters dealing with arabic fonts :-)

thx :)

Re:Add a css class

_____

Hello,

If you want to apply different CSS styles for different quizzes, you can create necessary CSS templates in 'Components -> ARI Quiz -> Templates' section on the component backend and then assign necessary CSS template with quizzes in quiz settings page using 'Template' parameter.

Yes..see what you mean, and ... wow your component is great :-)
But, sorry to insist, but my need is a little bit more specific : I'd like to attribute different template class (especially arianswer class) INSIDE a quiz - not for the whole of it-.

Question 1 >> standard template
Question 2 >> specific template (made for arabic letters >>> arianswer a lot bigger)
Question 3 >> back to standard template

your answer helped me a lot to explain my problem in other words : It is exactly what I'd like to do, but calling any template I want from the questions of my quiz (any quiz'question would have an option : what template to use).

thank you again for your attention
