
How to export the detailed results?

Posted by czq1146 - 2014/03/28 09:11

Hi,

The exported quiz results only contain the start/end time and scores. But I want more details like every user's answer to each question, because I want to stat the accuracy rate for each question.

I can see these by viewing "Details" at the backend, how can I export them as excel or sth else?

Thanks,

Zhaoqun Chen

Hello,

Sorry, but currently the extension doesn't support this ability.

Hi,

Is it possible to export them directly from the database? And can you tell me which tables the detailed results store?

It requires to create an additional PHP code which will process data from a database.

Detailed results / Result Scale

Posted by llave.8 - 2014/04/03 00:19

Hi, Ari Soft!

We have installed the Ari Quiz Lite on our Joomla 2.5 and it was very useful. We are now truly considering upgrading to the premium Ari Quiz but for one concern:

If we get to purchase the premium, can we pull a report showing the results of what questions were answered right and

wrong? Presented conveniently in a chart, perhaps?

We had thousands of quiz takers and we wanted to know which of the questions were answered correctly the most/least, as we want to see where the knowledge is. I also wonder if this is what your Ari Quiz vs. AQ Lite comparison table meant when you said Ari Quiz premium "supports result scale" and "detailed statistics".

I just wanted to make sure that we can really get this feature before purchasing the paid version.

Thanks,
John

Hello,

Thank you for your interest in our extensions. "ARI Quiz" doesn't show a chart with questions, but we can implement it as a custom development.

About "Result scales", you can read here.

Regards,
ARI Soft

Thank you for your prompt response.

Just to clarify, so the premium Ari Quiz provide a report showing the results of what questions were answered incorrectly?

What I mean is, something (not necessarily exactly) like this:

Question No. 1 = 225 quiz takers answered incorrectly. (60% picked Option 1)

Question No. 2 = 10 quiz takers answered incorrectly. (80% picked Option 4)

Question No. 3 = 168 quiz takers answered incorrectly.(1% picked Letter B)

The extension doesn't provide this report, but we can implement it as a custom development or you submit a feature request here and we will implement it in a future version of the extension.

Regards,
ARI Soft
