
Aborting quiz causes error

Posted by niesomaticus - 2014/04/01 08:46

Hello,

if someone aborts a quiz and don't want to "repeat" it, I get an error

Trying to get property of non-object in
...templates/template-name/index.php on line 18

By repeating the quiz all works fine.

What is the reason for this error? :dry:

Regards
Niesomaticus

Hello,

According to the error message, we suppose this problem with site template, not with "ARI Quiz".

Line 18 is
\$params = \$menu->getParams(\$active->id);

The same problem causes if I "pause" a quiz and then want to turn back by clicking the "return" button.

This problem with site template. It seems \$active object is null.

Well, although it was previously already and I didn't changed the template or it's settings. But probably you are right. But I don't know how to fix it. That's life :S

You can contact site template developers so they fix this problem.

Well, I'll try it. But this function still worked by using the same template ... :(

The error occurs in site template code, it is not "ARI Quiz" issue.

First of all I want to apologize, you were absolutely right. The problem was that with a redirect no item has been set. In the template "Haven", the problem can be solved as follows. The rows 18 and 19

```
18 $params = $menu->getParams( $active->id );  
19 $pageclass = $params->get( 'pageclass_sfx' );
```

must be replaced.

```
if ($active != NULL) {  
    $params = $menu->getParams( $active->id );  
    $pageclass = $params->get( 'pageclass_sfx' );  
} else {  
    $pageclass = "";  
}
```
